Comparing Financial Literacy of 15-Year-Old Students Who Expect to Work in Finance

The findings provide a cross-national picture of students' career expectations in finance and explore the association between such expectations and financial literacy. Compelling observations challenge assumptions and contribute to the existing literature by using data from the PISA 2015 financial literacy assessment.

Students' **CAREER EXPECTATIONS** in **FINANCE** are positively correlated with **FINANCIAL LITERACY** performance, except when controlling for **BACKGROUND** characteristics.

Education Systems

13

education systems participated in this assessment

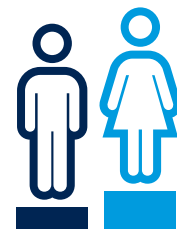

Career Expectations

3%

of students expected to work in finance as adults

Gender Differences

9 out of 13

education systems showed differences by gender
